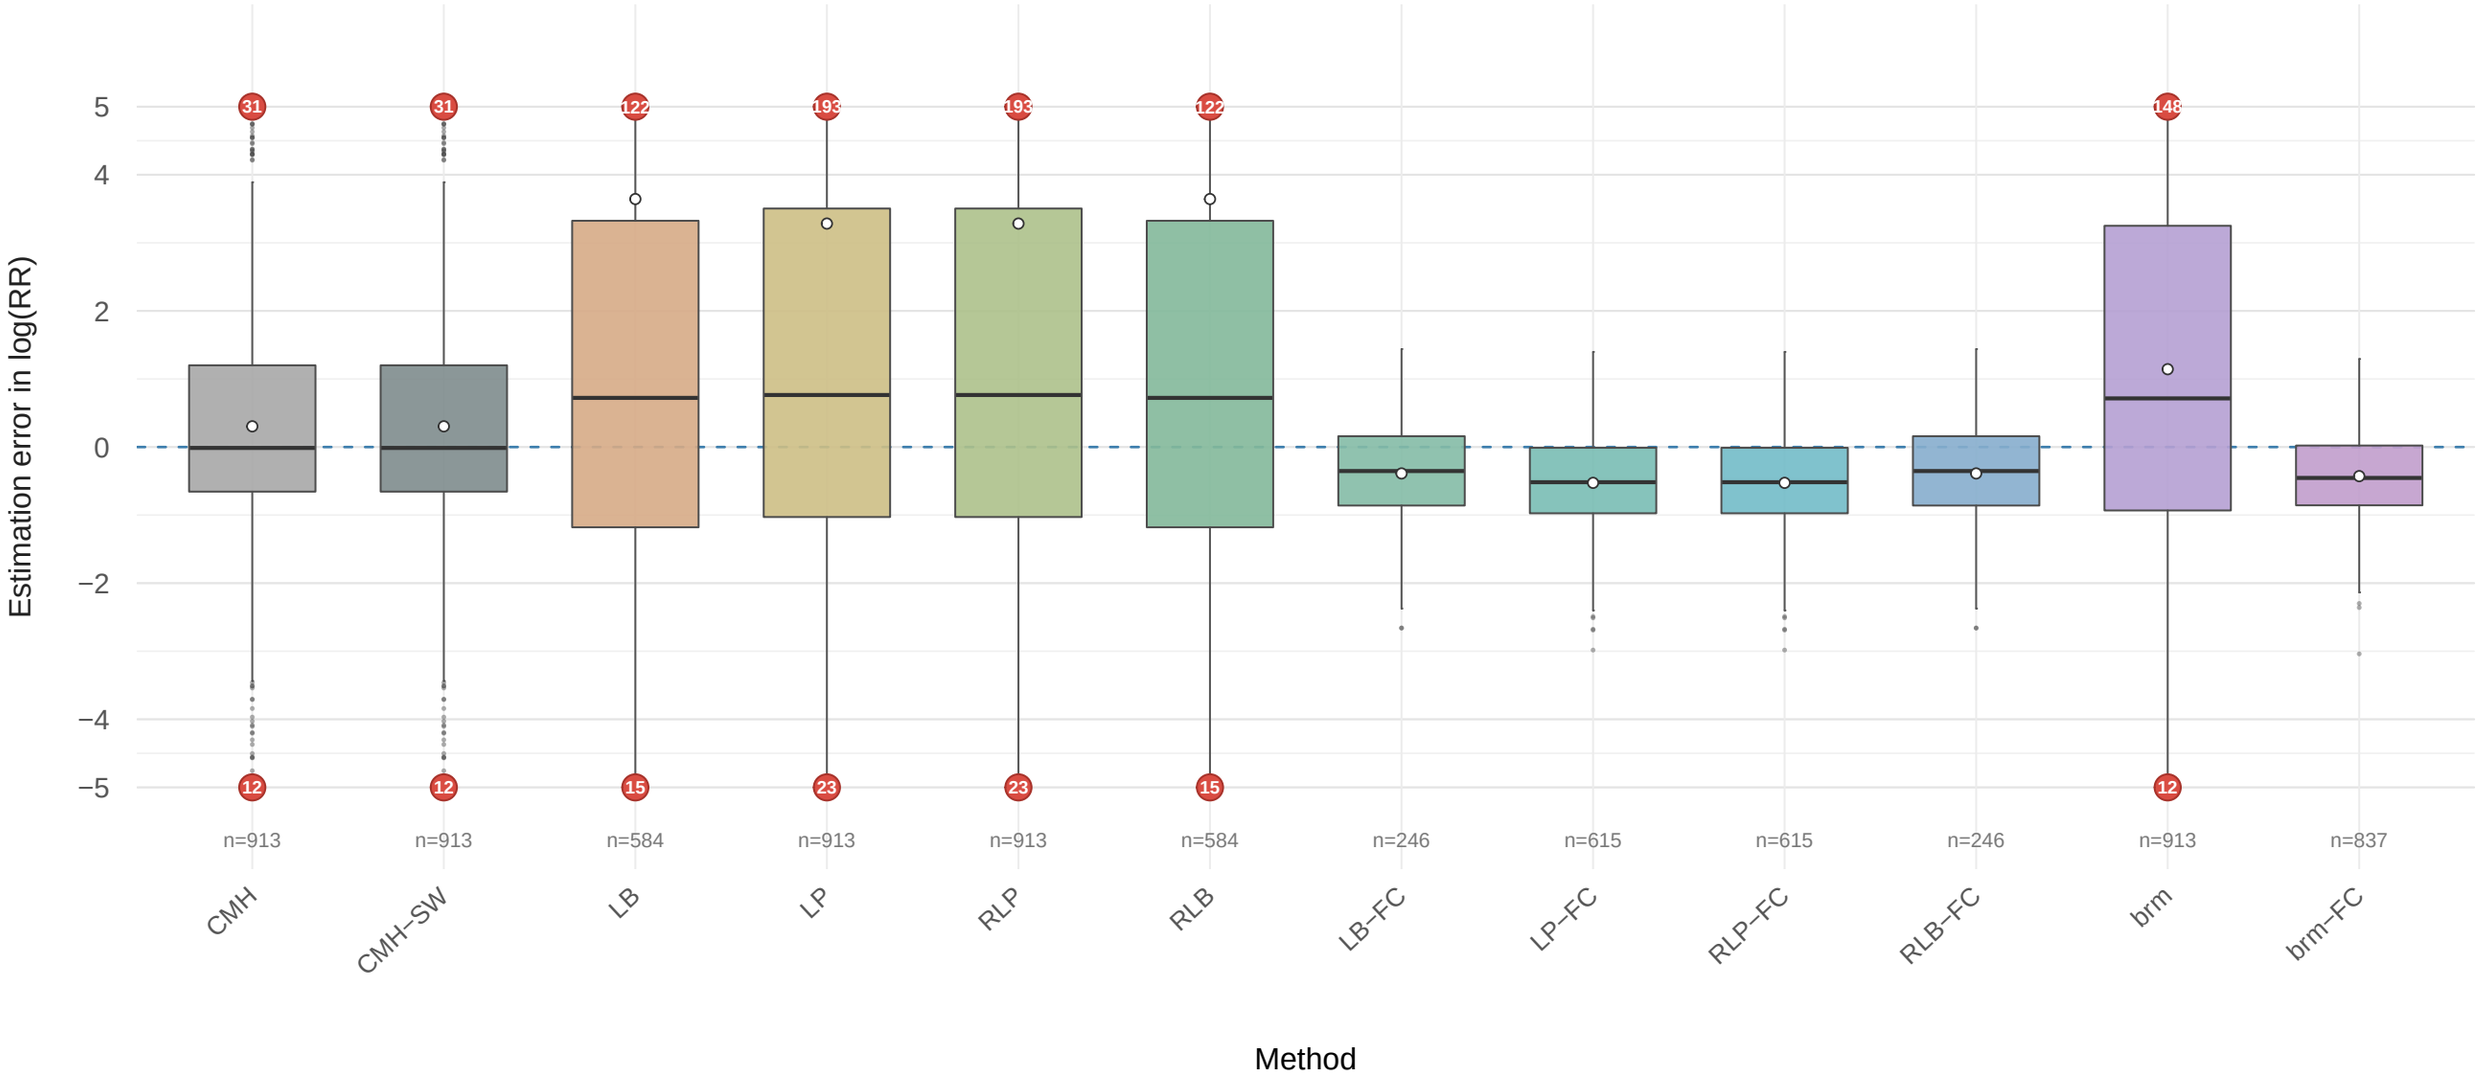
# All−method bias distributions

BC population marginal A/C log RR

score_MAIC | S05_rare_n100_ess015_score_MAIC | MC1000



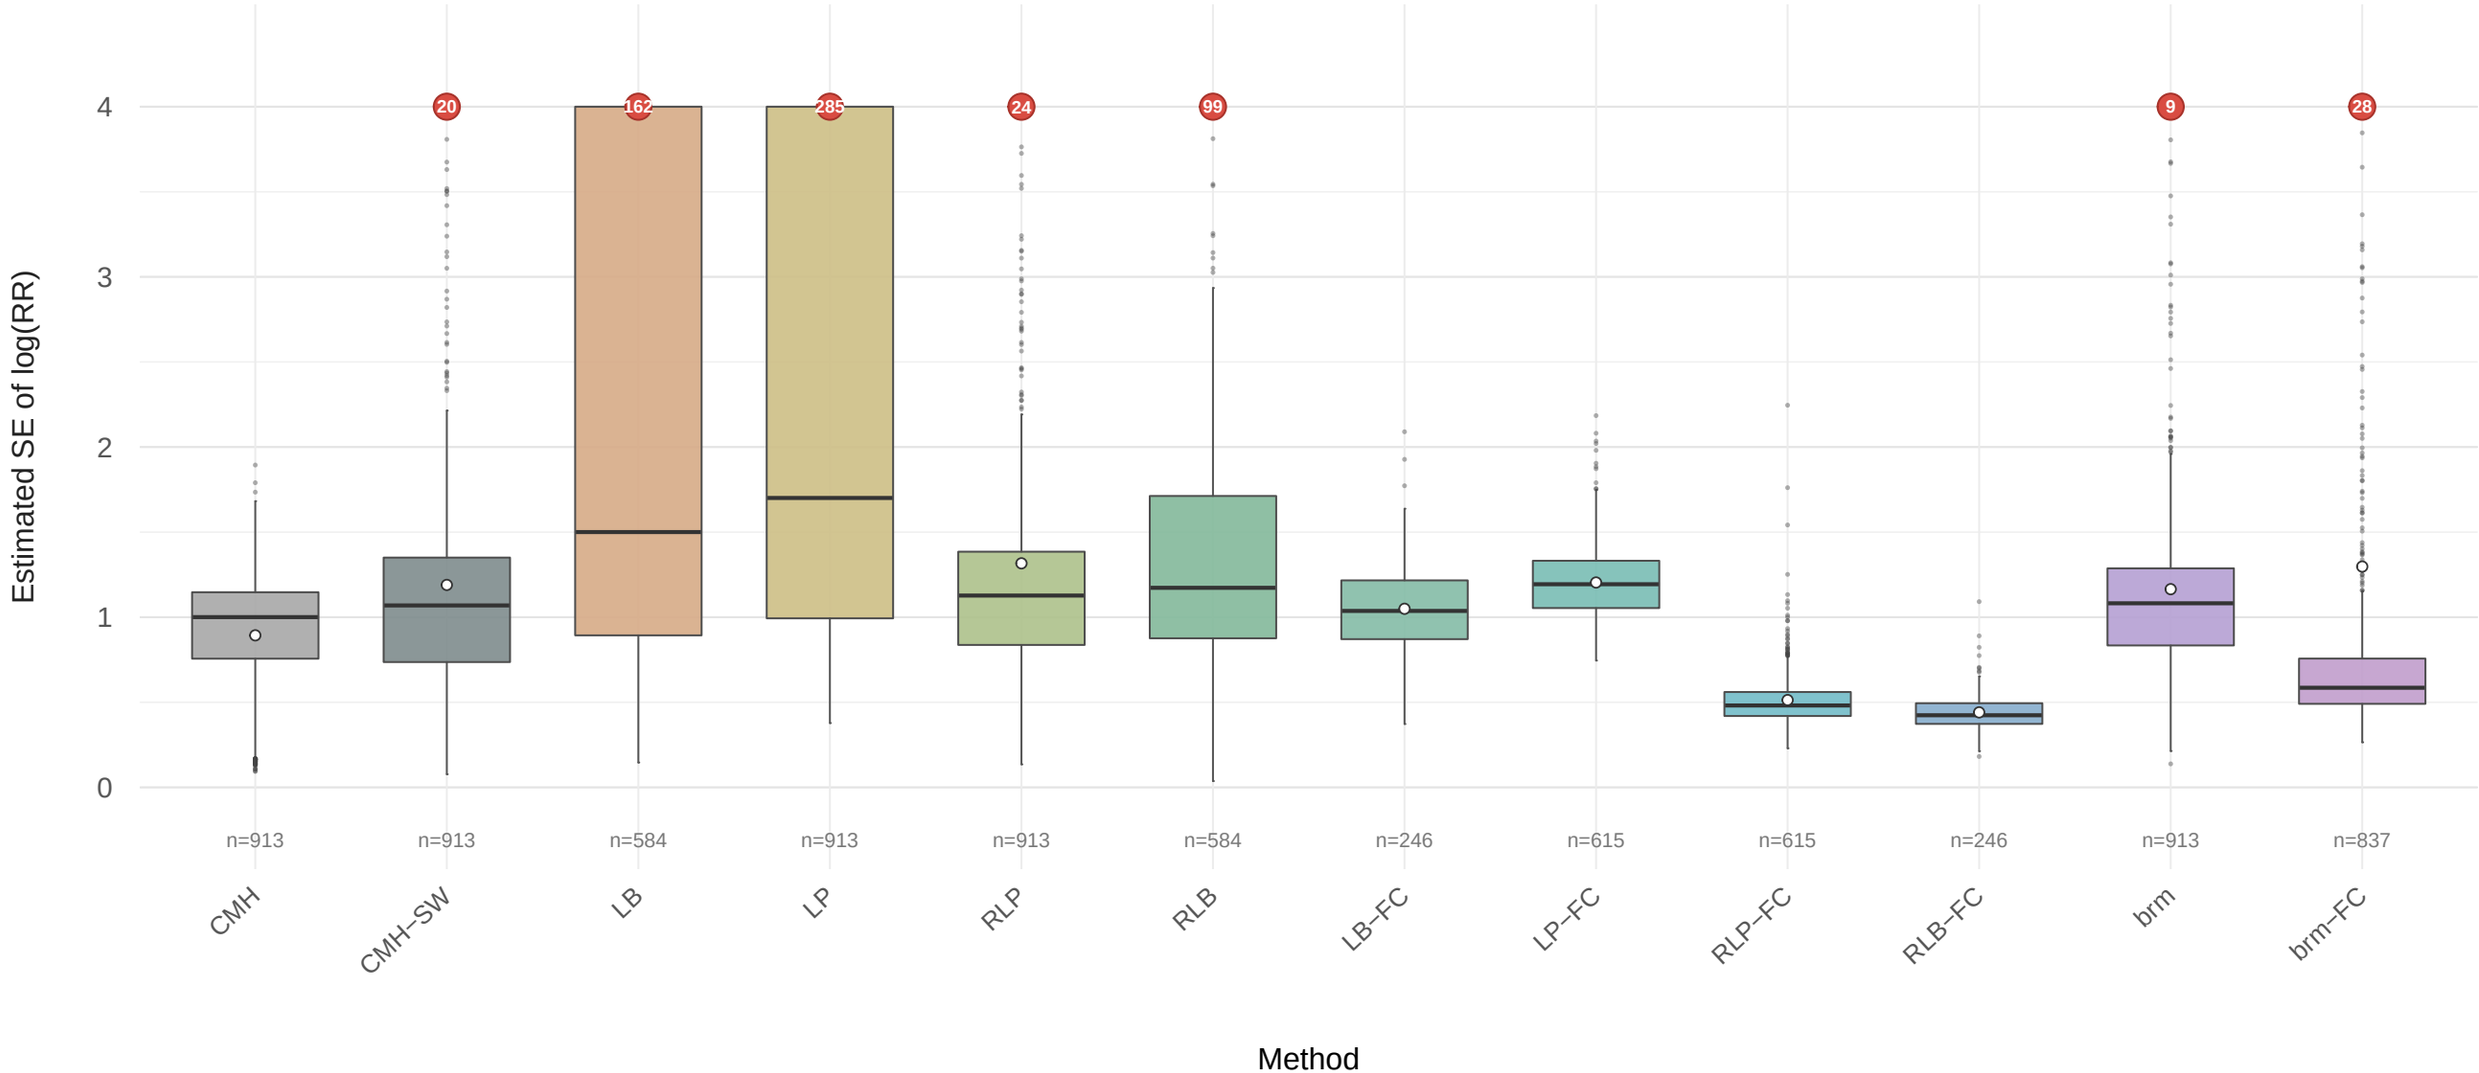
White points: full−data means. Red circles: display−clipped counts; statistics use all valid values.

Bias reference = 0; critical values +/−5; capped range activated.

# All−method SE distributions

BC population marginal A/C log RR

score_MAIC | S05_rare_n100_ess015_score_MAIC | MC1000



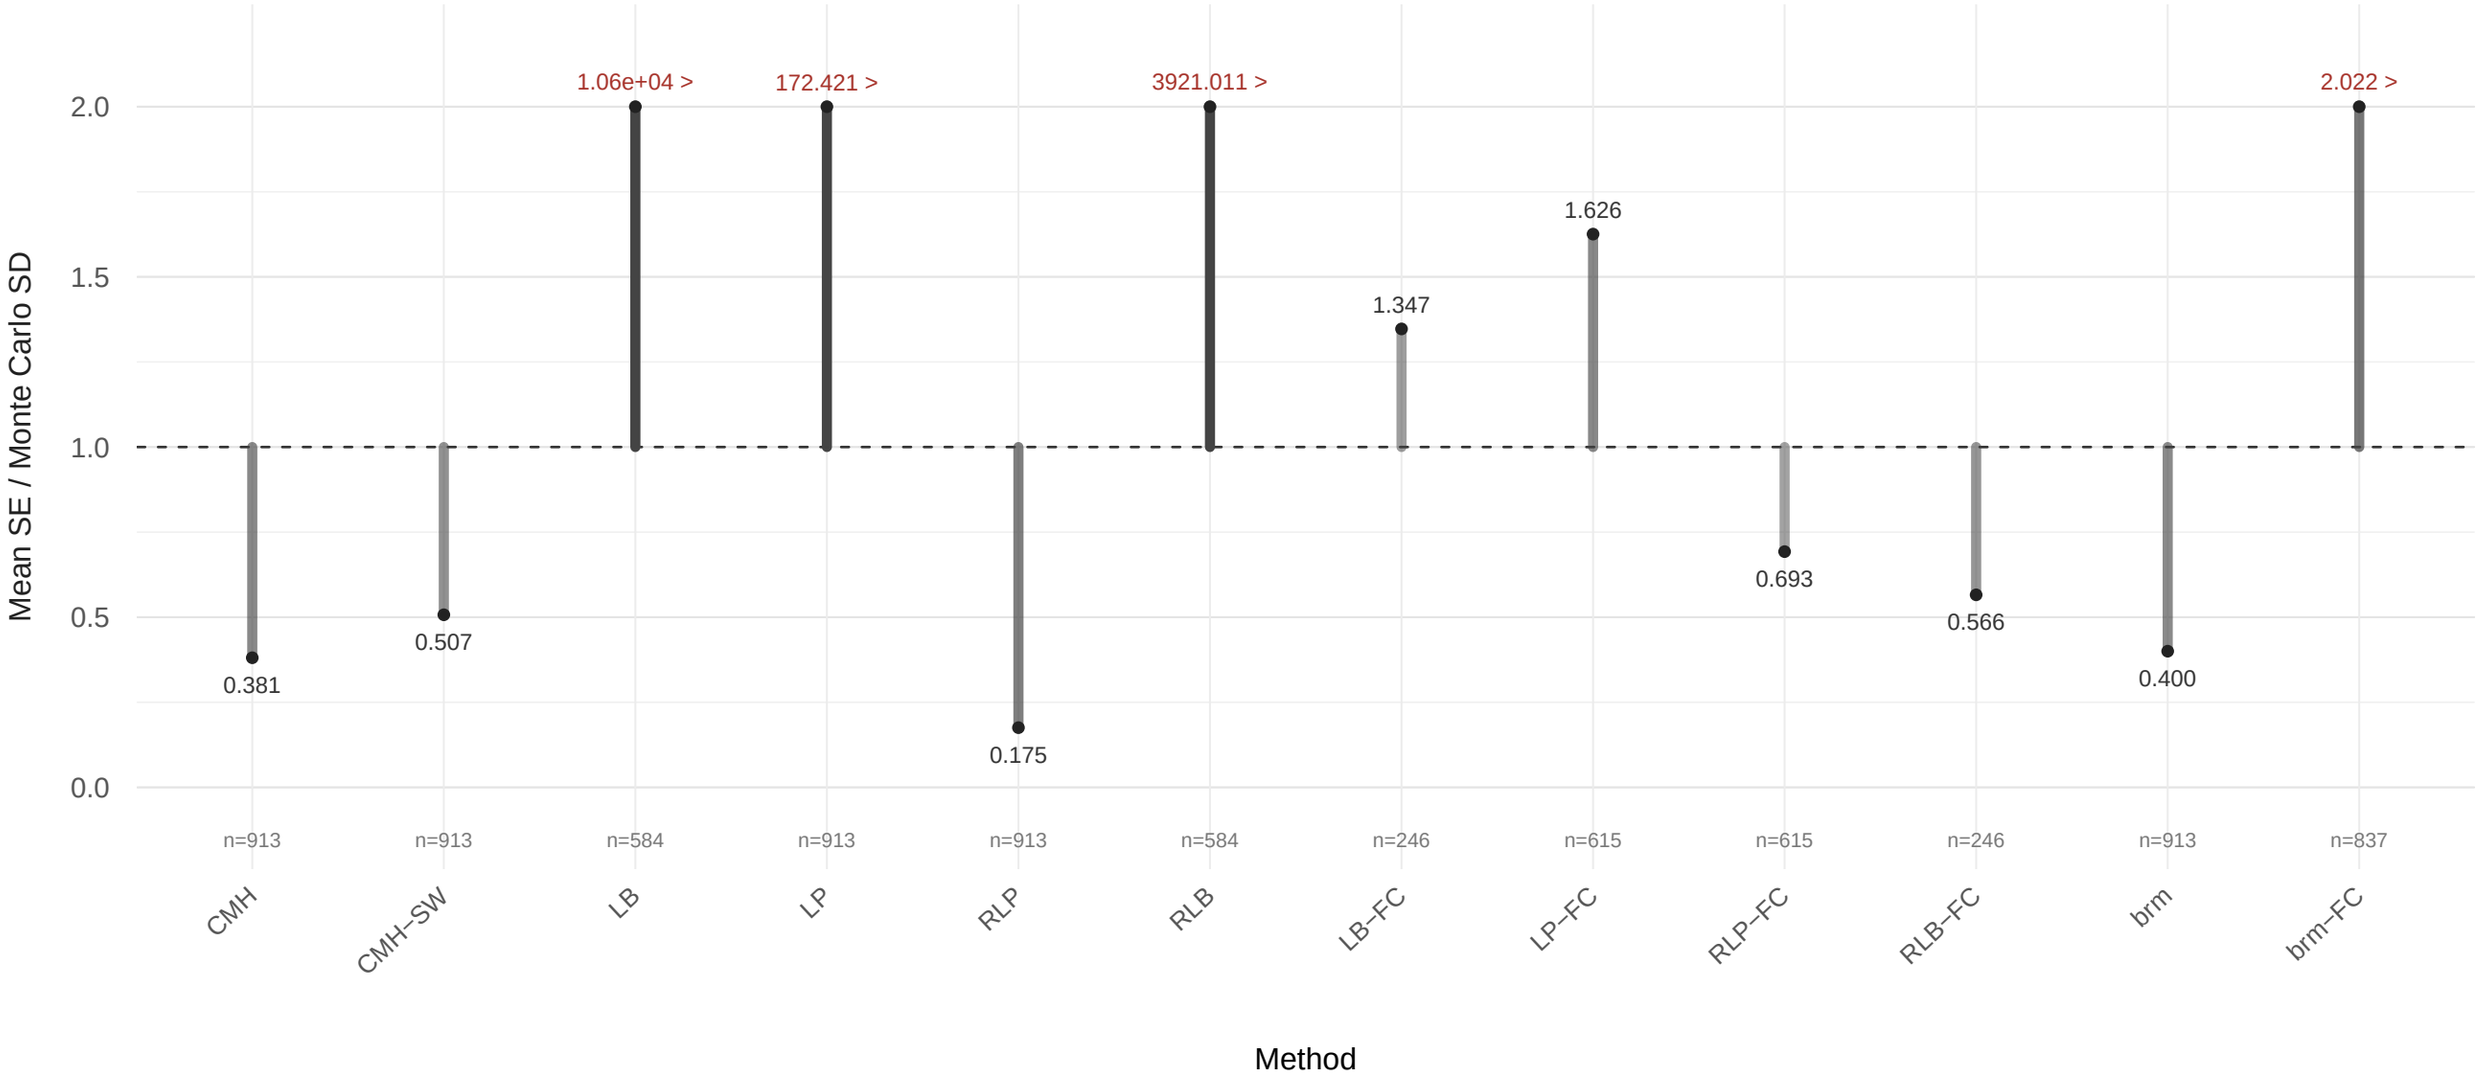
White points: full−data means. Red circles: display−clipped counts; statistics use all valid values.

SE critical value = 4; capped range activated.

# All−method SE calibration

BC population marginal A/C log RR

score_MAIC | S05_rare_n100_ess015_score_MAIC | MC1000

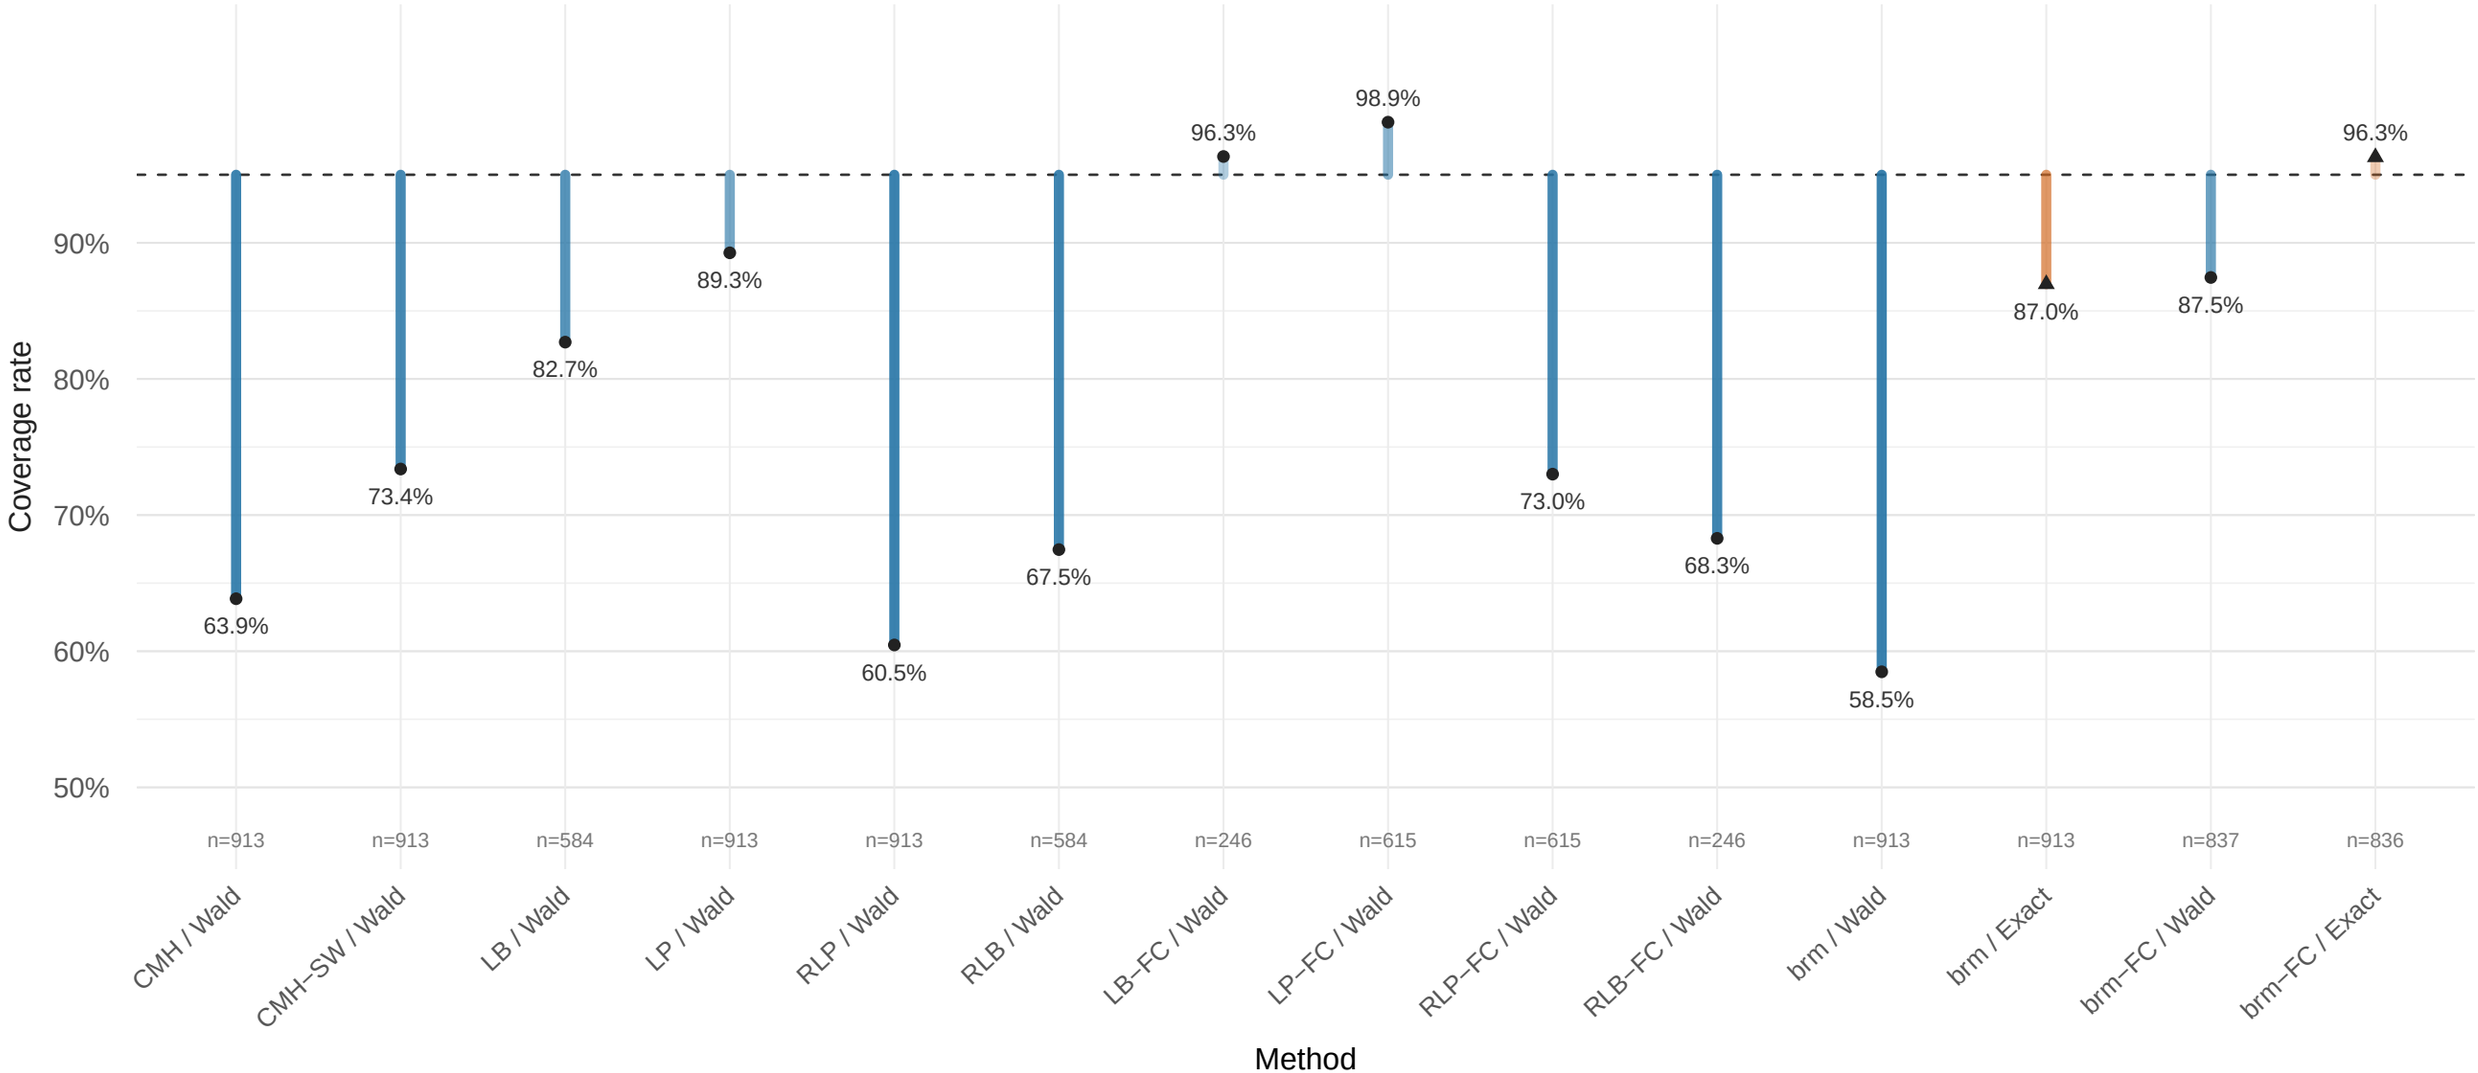


Target = 1. Matched SE−valid replicates; Exact SE not provided. Darker stems = larger deviation.

# All−method coverage rate

BC population marginal A/C log RR

score_MAIC | S05_rare_n100_ess015_score_MAIC | MC1000



Target = 95%. Wald: blue; Exact: orange. Darker stems = larger deviation. Valid returned intervals only.
